

【Submersible pump cable】

DESCRIPTION

Submersible pump cables are waterproof electrical wires specifically designed for underwater submersible pumps. They are made with high-quality rubber or polyethylene insulation, offering excellent waterproof, oil-resistant, acid and alkali-resistant, and aging-resistant properties. The cable is flexible and wear-resistant, allowing for long-term immersion in water. Its strong insulation and stable conductivity effectively ensure the safe operation of the submersible pump. Suitable for various submersible pumps, including clean water pumps, sewage pumps, and deep well pumps, it is adaptable to harsh environments such as underwater, humid, and muddy conditions. The product has a robust structure, is resistant to tension and compression, and is not easily cracked or damaged. It is easy to install and is a dedicated cable for industrial drainage, agricultural irrigation, pond pumping, and other applications, offering safety, reliability, and a long service life.

PARAMETER

Rated voltage	450/750V
Conductor	pure copper stranded conductor
Insulation	EPR/PVC
Sheath	rubber/PVC, waterproof and corrosion-resistant
Cores	2, 3, 3+1, 4 cores
Cross-section	1.5mm ² ~ 10mm ²
Operating temperature	-20°C ~ 60°C
Waterproof rating	IP68
Features	tensile-resistant, pressure-resistant, durable
