

# 【 Lan cable 】

## DESCRIPTION

Our complete series of high-grade network cables covers CAT6A outdoor cable, CAT6A patch cord and CAT7 shielded cable, together with matched PoE power injectors. All cables adopt high-purity solid bare copper core, equipped with multi-layer shielding structure to effectively resist external signal interference and reduce crosstalk. Various jacket materials including UV-resistant PE, flexible PVC and fire-resistant LSZH are optional, adapting to indoor wiring, outdoor laying, data center and engineering installation scenarios. They support high frequency bandwidth, stable high-speed transmission and full PoE power supply function, strictly conform to international industry standards, pass professional performance testing, with stable quality, long service life and wide application range.

## PARAMETER

|                        |  |
|------------------------|--|
| Structure Type         | S/FTP Double Shielded                                    |
| Conductor Material     | Pure solid bare copper                                   |
| Common Gauge           | 23AWG standard core                                      |
| Transmission Frequency | 250MHz-600MHz  |
| PoE Function           | Support 802.3bt high-power PoE                           |
| Jacket Material        | PE / PVC / LSZH  |
| Use Scene              | Indoor wiring / Outdoor engineering / Cabinet connection |
| Matching Accessory     | 802.3at standard PoE injector                            |
| Certification          | Meet international network wiring standards              |
| Advantage              | Anti-interference, weatherproof, durable, stable signal  |
